

## Recommended Priorities for the WTO E-Commerce Discussions

September 26, 2018

Global industry welcomed the announcement at the Eleventh WTO Ministerial that 70 WTO economies would begin work “towards future WTO negotiations on trade-related aspects of electronic commerce.” Digital technologies and e-commerce are vital to the growth and development of the global economy, and the WTO is an important venue for the development of e-commerce rules that will ensure that companies can grow, innovate, and create jobs. Recognizing that enabling digital trade through cutting-edge e-commerce rules makes global trade more inclusive and promotes a free and open internet, our associations recommend that these negotiations advance efforts to:

1. **Allow data to move across borders** to enable firms and workers in all sectors to serve customers globally, access information, and continuously innovate;
2. **Prevent requirements to localize the storage and processing of data**, as companies of all sizes, above all SMEs, rely on the economies of scale that global data centers provide;
3. **Prohibit tariffs and taxes on cross-border data flows and digital products**, ensuring firms in any economy can compete on a level playing field around the world and local firms and consumers have access to the best and most innovative digital services and products;
4. **Ensure full market access for services**, including new services, so companies can continue to innovate with the confidence that their services will be able to reach consumers;
5. **Encourage members to join WTO Information Technology Agreement** and its expansion (ITA and ITA II), guaranteeing low-cost technology solutions for all consumers;
6. **Prohibit requirements that companies transfer technology, source code, algorithms, or encryption keys**, to ensure that companies can export with the certainty that their intellectual property – and their customers’ data – is secure;
7. **Ensure the adoption of intermediary liability protections**, so that online service providers do not have to restrict their activities under threat of liability for third-party content that they do not control;
8. **Avoid regulations of internet services that do not serve legitimate public policy objectives or consider the specific characteristics of both the service and the market**, so that innovative services can reach new markets and ensure that consumers have a broad choice of services;
9. **Eliminate or reduce red tape and discriminatory regulatory barriers** for all technology products, accelerating technological adoption; and,
10. **Simplify and expedite customs clearance** for low-value shipments and raise informal clearance and *de minimis* thresholds to enable e-commerce and SME exports.
